DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 27-38, drawn to an active matrix device having a plurality of color filters disposed on the pixel electrodes and a black matrix overlapping the thin film transistor, gate line, and data line except for the drain electrode, classified in class 349, subclass 43.
- II. Claims 9-26, drawn to a method of forming an active matrix array substrate comprising sequentially forming an active layer of intrinsic amorphous silicon and simultaneously forming a data line, data pad, gate pad, source electrode and drain electrode, classified in class 438, subclass 30.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the device of invention I can be formed without simultaneously forming the data line, data pad, gate pad, source electrode and drain electrode but instead could be sequentially formed using a series of photolithography processes.

Art Unit: 2871

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
